

N2W Software – Customer Webinar Testimonials

There are over 2,000 enterprises around the world using our software and this is set to increase even more as organizations not only increase their use of N2WS; solution but AWS overall. Our existing customer base contains the most progressive and forward-looking enterprises in the world, ones which are most interested in acquiring the latest and best cloud backup and disaster recovery technology to be prepared for the growing number of data breaches, ransomware attacks, user errors, and weather-related disasters.

What is most rewarding is knowing that potential downtime is no longer keeping our customers up at night. We hear countless stories of N2WS saving critical workloads, and N2W Software is happy to continue developing N2WS to fit the specific needs of our customers.

N2WS automates backup and disaster recovery for enterprises and features very flexible backup scheduling, which ensures you are protected from outages, failures, and data losses. You can read over [80 5-star reviews](#) from cloud innovators who are successfully using N2WS to secure their AWS workloads.

Several of N2WS' customers have detailed their success using N2WS and ensuring uptime and availability for their critical workloads in AWS case studies and various summits:

N2WS has helped Best Friends Animal Society saves animals' lives, literally!

Best Friends Animal Society is the largest animal shelter network in the United States. They are on a mission to get the entire country's shelter system to be no-kill by 2025. To do this, they are using data and AWS along with N2WS.

Brent from Best Friends remarks ***“With N2WS, we can easily restore a server, keeping all of the same metadata while using the same security groups. N2WS and AWS satisfy all of our requirements and make my job much easier.”*** Read their inspirational story [here](https://aws.amazon.com/partners/success/best-friends-animal-society-n2ws/) --> <https://aws.amazon.com/partners/success/best-friends-animal-society-n2ws/>

DB Systel UK Protects over 0.5PB of Data Using N2WS and AWS

DB Systel UK keeps Deutsche Bahn's busy travel network running on time and maintains business continuity for its growing customer base using N2WS Backup & Recovery, available in AWS Marketplace.

DB Systel, the IT division of Deutsche Bahn led a [fascinating session](#) along with AWS and N2WS on how they manage >1,500 volumes across 700 servers using N2WS, an automated backup & recovery solution they could trust to manage the 2nd largest transport company in the world →

Lancom set up seamless backup and disaster recovery using N2WS & AWS

aws SUMMIT SYDNEY

Our N2WS Backup Setup

A TYPICAL AWS BACKUP CONFIGURATION

Jordan Jacobs, Senior Director
Global Cloud Solutions,
and Imran Sadiq, Technical Director,
Lancom Technology

Sponsored by Veeam:
Seamless Backup and DR for AWS

How car

In this 21-minute presentation from AWS Summit Sydney, Imran Sadiq [discusses how Lancom has set up seamless AWS backup and disaster recovery](https://n2ws.com/support/video-tutorials/seamless-aws-backup) of their critical data. <https://n2ws.com/support/video-tutorials/seamless-aws-backup>

Further Testimonials

"Our biggest challenge dealing with cloud backups and DR was managing multiple "(2 accounts and instances (Windows and Linux). Some of our customers also wanted to have access to a dashboard and self-service functions. The multi-tenant option of N2W was the killer feature we were looking for. N2WS helped us improve our overall customer experience by allowing us to provide customers with new self-service backup and recovery capabilities and direct access to their account."

Sven Ramuschkat

Owner, tecRacer GmbH

"In the end companies don't want to manage all these different backup systems, and "(3 keep them up to date. They want a centralized solution, with reporting, alerting and audit trail in place, as well as properly implemented features like advanced retention policies. Ease of Management and ease of mind was the reason we chose CMP over other backup solutions. It allows the company to focus on its business."

Tom De Blende,

Cloud Architect at Clouadar

"Great Product - Would recommend 100% N2WS gives us confidence that the backups have been performed each night and are consistent. Really love the new feature that allows to

restore an individual file from a snapshot without the need to having to restore the full instance. This is a real time saver :-). Set it up within no time at all and then forget about it no maintenance needed. Great Product."

Gavin Bell

Falck Safety Services

"N2WS is my go-to product for the snapshot and AMI replication process. One of the "(5 most useful features for me is that it automates the replication of the AMI and volume snapshots to another region. It took a manual process and completely automated it. Additionally, the few times I needed support, they were great at responding with the correct answer the first time."

Timm Zahn

Mobile Epiphany, LLC

"Working with N2WS's Support team was a pleasure, with good turn around on all contact. AWS - Moving snapshots to glacier would be a nice option in DR for non-production systems and historical data. AWS - Displaying information on actual Size used for Snapshots is needed, it is key to making cost and strategic decisions. Thank You."

Herman Steyn

Lemongrass Consulting

"In looking for a backup solution for our AWS environment we tried several vendors, but "(7 N2WS was the best solution for us. It was easy to setup and intuitive to configure our Linux and Windows servers (including vss). What really sold us on the product was the great support we received while still using the product in trial mode – they were very responsive and thorough in his explanations of any issue we came across."

Jeff Strupp

SmileBrands Inc.

"When Harvard Central IT needed to evolve their backup services to support an AWS "(1 cloud initiative, we wanted a platform that leverages the benefits of native AWS data protection, could provide a global view over backup operations and allow self-service and integration with automation services. With N2WS from N2WS we get all that and a solution built on a known platform (AWS) allowing us to capitalize on our in-house knowledge. Now, through the Veeam acquisition, we have the potential of a single platform for both on-premises AND cloud based workloads, which is a real win-win."

Ron Hawkins - Senior Consultant- HUIT Infrastructure Technology Services –

Harvard University
